Dear Sir,

Urology Partners specializes in providing care and education to men who suffer from erectile dysfunction (ED) and bladder control problems (stress urinary incontinence) – common conditions often caused by diabetes, prostate cancer or cardiovascular disease. We also specialize in enlarged prostate (BPH) which is a natural, non-cancerous enlargement of the prostate that affects more than half of all men over the age of 60.

**ED** can limit your intimacy, affect your self-esteem and impact your most important relationships. **Bladder control problems** can limit your activities; keep you homebound, in costly, messy pads, dealing with the frustration and embarrassment, and the constant fear of leaking and odor. **Enlarged Prostate** leads to frequent urination, weak flow, and interrupted sleep.

The good news is that nearly every case is treatable today. You don't have to simply live with these problems, **often they can be fixed for good**. We understand that oral therapy does not work for many men, and we specialize in surgical and laser treatment options that may provide a permanent, satisfying solution.
